CRM APPLICATION

FOR THE CHAI SHOP & CO

Customer Relationship Management System

Project Presentation

1. Introduction

The CRM Application for The Chai Shop & Co. is a digital system designed to manage customers, orders, feedback, offers, loyalty, and business interactions in one place.

The application helps the chai shop understand customer preferences and build long-term relationships through organized customer data and personalized engagement.

2. Problem Statement

- Customer information is difficult to maintain manually.
- Order and customer history may be scattered across different records.
- Customer feedback and complaints can be missed.
- Loyalty and repeat-customer tracking is difficult.
- Promotional offers cannot be targeted efficiently.
- Business owners have limited visibility into customer trends.

3. Objectives

- Centralize customer information and interaction history.
- Manage orders, visits, feedback, and preferences.
- Introduce loyalty points and customer rewards.
- Provide personalized offers and promotions.
- Improve customer service and retention.
- Generate useful reports for business decisions.

4. Existing System vs Proposed System

Existing System	Proposed CRM System
Manual registers / spreadsheets	Centralized digital customer database
Limited customer history	Complete interaction and order history
Generic promotions	Targeted offers and campaigns
Manual loyalty tracking	Automated loyalty points
Difficult reporting	Dashboard and business reports
Feedback may be missed	Structured feedback management

5. Key Features

- Customer registration and profile management
- Order and purchase history
- Customer segmentation
- Loyalty points and rewards
- Feedback and complaint management
- Offers, coupons, and notifications
- Sales and customer analytics
- Admin dashboard and reports

6. CRM Modules

Module	Main Functions
Customer Management	Profiles, contact details, preferences, visit history
Order Management	Orders, bills, purchase history
Loyalty Management	Points, rewards, membership levels
Feedback Management	Ratings, reviews, complaints, resolution status
Marketing	Offers, coupons, campaigns, notifications
Reports	Sales, repeat customers, popular products, engagement

7. System Architecture

- User Interface Layer – Customer and staff/admin screens.
- Application Layer – Authentication, CRM logic, orders, loyalty, marketing and reporting.
- Database Layer – Customers, orders, products, loyalty, feedback and campaign data.
- Notification Layer – SMS, email or app notifications for offers and updates.

8. Database Design

Table	Important Fields
Customers	Customer_ID, Name, Phone, Email, Preferences
Products	Product_ID, Name, Category, Price
Orders	Order_ID, Customer_ID, Date, Total_Amount, Status
Order_Items	Order_Item_ID, Order_ID, Product_ID, Quantity
Loyalty	Loyalty_ID, Customer_ID, Points, Rewards
Feedback	Feedback_ID, Customer_ID, Rating, Comment, Status
Campaigns	Campaign_ID, Title, Offer, Start_Date, End_Date

9. User Roles

- Admin – Full system control, reports, users, products and campaigns.
- Staff – Customer registration, orders, feedback and loyalty updates.
- Customer – Profile, order history, rewards, offers and feedback.
- Manager – Business analytics, customer trends and performance reports.

10. Application Workflow

- Customer registers or is added by staff.
- Customer places an order.
- Order and purchase details are stored automatically.
- Loyalty points are calculated and added.
- Customer can provide feedback.
- CRM analyzes customer behavior.
- Relevant offers and rewards are sent to eligible customers.
- Management reviews reports and improves business strategy.

11. Technology Stack

Layer	Suggested Technology
Frontend	HTML, CSS, JavaScript / React
Backend	Java / Python / Node.js
Database	MySQL / PostgreSQL
Authentication	Role-based login and secure password handling
Reporting	Dashboard with charts and exportable reports
Deployment	Local server or cloud hosting

12. Benefits

- Better customer experience
- Higher customer retention through loyalty programs
- Faster access to customer and order information
- Improved feedback handling
- More effective marketing campaigns
- Data-driven business decisions
- Reduced manual record keeping

13. Future Enhancements

- Mobile application for customers and staff
- QR-based ordering
- Online ordering and delivery integration
- AI-based product recommendations
- WhatsApp/SMS marketing integration
- Advanced customer churn prediction
- Multi-branch CRM management
- Digital wallet and online payments

14. Conclusion

The CRM Application for The Chai Shop & Co. provides a centralized platform for managing customers, orders, loyalty, feedback, and marketing.

By converting customer interactions into organized data, the system can help the business deliver better service, build stronger customer relationships, and make informed operational decisions.

THANK YOU

CRM Application for The Chai Shop & Co.
